

Re:Sourcing UK

James Dawson: *Film With A Happy Ending*

James Dawson Ltd is a Lincoln-based manufacturer of advanced industrial hoses designed to withstand high temperatures for a diverse range of applications.

The process of production requires that the silicone and organic rubber EPDM sheets need a non-stick layer of 'Melinex' PET film interleaved between them. This Melinex, generally clean with some slight rubber contamination, had been baled at the site, seeking a non-RDF outlet.

Through the Re:Sourcing UK service, information on this resource was brought to the attention of a number of specialist recyclers with an interest in low-density plastics such as film. For some, the contamination was an issue, but one company provided a positive outlet. This led to the Melinex being successfully collected and recycled.

“

Following a Waste Workshop in Lincoln, we were able benefit from the information held by Re:Sourcing UK in order to find a home for this troublesome material. We were keen that it did not simply get incinerated, so were delighted to find a better recycling route.”

”

Denzil Phillips, QE Manager, James Dawson Ltd

In order to resolve this waste issue, Re:Sourcing UK analysed their in-house database of specialist recyclers, based on their proximity to the site. Information such as material, tonnage and contamination was sent to prospective recyclers, and their responses compiled and sent to James Dawson Ltd.

If you have a waste stream that you feel deserves a better home than landfill or waste-to-energy and want to discuss how Re:Sourcing UK can help you, then please get in touch.
